

## Polycarbonate Details

Polycarbonate sheets internal cross-brace structure provides excellent strength at relatively low weight. They are manufactured with thickness, ranging from 10 to 16 mm.

## BENEFITS

The polycarbonate for greenhouses has the following advantages:

- Suitable for difficult climatic conditions
- Low U-Factor save on heating energy costs
- Provides high translucency
- Rigid sheet structure provides extra strength under wind and snow loads
- Available with Primalite, Silhouette and other special coatings
- Covered by 10 Year Warranty for color, light transmission and strength
